GET YOUR EXOTIC CARS TUNED BY THE EVOMS*it* TUNER
From **March 7th - 13th 2012** at ATP Motorsports

Evolution MotorSports is world renowned and owns one of the finest aftermarket Autoteknik facilities in the USA. Our impeccable tuning center is the home to our design, engineering, manufacturing, testing and distribution. Our purpose built, state of the art all wheel drive Mustang Dynamometer cell with data acquisition equipment and wind tunnel cooling/ventilation system is second to none. Our tuning equipment, combined with our methodical testing procedures and our comprehensive knowledge allows us to test and tune with the most accurate results and feedback from the vehicle. All of our equipment and the entire dyno testing process have been developed and perfected over the past 10years

The EVOMSit software engineering team consists of a worldwide network of the most qualified and highly respected members of an elite tuning community. In Arizona, at EVOMS headquarters, the team is responsible for the research, development and testing where founder and President Todd Zuccone is in charge of the software calibrations and ECU tuning. Mr. Zuccone works directly with Senior Technician / Porsche specialist and engine builder John Bray. The combination of these two powerful, mechanical and meticulous minds are responsible for deciphering and understanding the "brain" of the cars, translating the information and making the necessary changes to allow all of the engine systems and software calibrations to work together in perfect synchronicity.

Particularly impressive is the EVOMSit software tuning. Partial-throttle response.

"The power is right there under foot in an instant. This car will melt distance upon command, is there a need to vaporize it as well?"

"Once you've tasted the power of the EVT700, you'll want to experience it time and time again.

"That this engine can be taken by a careful tuner from a standard 473 bhp to 708 bhp is a testament to engineering skill"

"The RS350 is one of the best modern Porsches we've driven on the loop, and the best 987"

"Remember the scene from Star wars when the Millennium falcon hits warp speed and the stars turn into straight lines?"

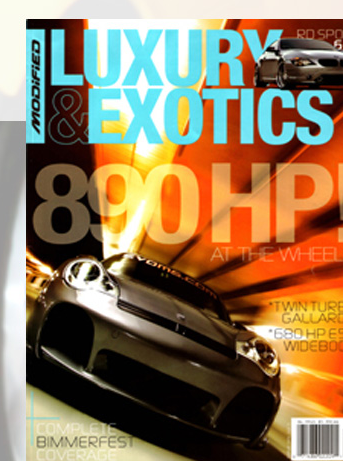

"The Cayman Rotates fast and you hear and feel the engine winding out right behind your vertebrae"

"As for speed? The 700 explodes every time you nail the gas. Frankly, its too much fury for even the smoothest streets..

"Let me tell you right here and right now, the EVOMS EVT700 Porsche 997 TT is the hardest-accelerating car I've ever driven - PERIOD."

"Tuning 996 turbos for more power has become a cult unto itself and it could be argues that the staff at Evolution MotorSports

- > Intensive interior cleaning
- > Headlamp restoration
- > Engine Wash

As we all know, luxurious and exotic vehicles can be considered a precious investment. Every car owners wants to give their investment the best protection. At ATP Motorsports, our unique services will maintain your vehicle in showroom condition

There are various good car care products in the automotive industry, however very few that can be among the finest. After many years of experience and many products tried on different vehicle paintwork and body, we have carefully selected the finest line of automotive cosmetic maintenance, with the advancement of German technology & products that help us to achieve perfection in every service we provide.

Premium Polishing & Waxing

Car's paintwork are constantly at risk from environmental pollution, as UV exposure, industrial fall outs, road salt and other natural hazards such as acid rain and tree saps. Having your car protected with ATP's finest car care products helps maintain your car in showroom condition. Even newly spray painted cars have hidden paintwork defects that are only visible under intense spotlights. ATP Premium Polishing & Waxing will bring the car to showroom condition.

Premium Diamond Coating

ATP's Premium Diamond Coating is recommended for new cars or cars that have done the ATP's Premium Polish & Waxing process. Our coating will give your car paint surface a strong hydrophobicity and nonstick properties with excellent easy clean effect on. Besides that, it would enhance gloss finish which can last the entire year. We provide the infrared service after coating to make sure the coating is cured before we deliver to customer.

Windscreen & Glass Polish and Coating

Cars that are not washed regularly or parked outside may have acid rain stains. With ATP's Windscreen & Glass Polish and Coating, it helps to remove acid rain marks and the coating application will give water repellency for a safety drive during the rainy days.

Headlamp Restoration

These days, many modern cars have their head and taillights manufactured out of plastic. Throughout the years, car headlamps are exposed to different environmental conditions such as chemicals, sunlight, road salts and scratches. With ATP's Headlamp Restoration, it is sure to remove all nasty things caused by environmental effects on your headlamp and will shine like new again. Polishing your headlamp can save you a lot of money instead of replacing them with new ones.

Interior Car Grooming

Caring for your interior is as essential as your car exterior. Leather care starts with non-drying leather cleaner that removes impurities. Then follow up with a rich leather conditioner to lock in essential moisture, keeping the leather soft and inviting. With ATP's Interior Car Grooming, the leather care products will clean, condition and protect automotive leather from the rigorous daily wear and tear. Our products are designed to prolong the beauty and longevity of leather seats with safe, nourishing formulas and UV protectant. With quality leather care, your leather seats will stand the test of time.
