

V-FLOW FORCED AIR INTAKE

PERFORMANCE UPGRADE

Engineered utilizing state of the art CAD CAM 3D modeling, CNC machining, computer controlled Superflow air flow testing and countless man hours, the V-Flow air intake systems represent the apex of air induction technologies. All of the EVOMS systems install in the factory locations and utilize the OEM "ram air" fresh air ducts for lower air intake temperatures and added power. Additionally, our systems also incorporate a custom cotton air filter and a 155 mm billet aluminum Venturi that acts as a vacuum for cold air which translated into more power and torque.

The Evolution MotorSports V-Flow Air Induction, when used in conjunction with the EVOMSit performance engine software adds more HP and more ft/lbs of torque. This performance system is the only one of its kind and it has been rigorously tested and validated by the EVOMS team!
